KEY POINTS

1. Ankyloglossia is relatively common in varying degrees and usually does not impair the establishment of breastfeeding.
2. A few infants with severe ankyloglossia will have difficulty attaching and sucking effectively.
3. It is not the degree of tongue tie alone that contributes to the difficulty in breastfeeding, but the match between mother’s breast and infant’s mouth i.e. flat nipples and high palate with a short inelastic frenulum causing restriction of elevation of the tongue.
4. Breastfeeding requires well defined peristalsis from front to back of the tongue as well as tongue-palate synchronisation.

ASSESSMENT OF TONGUE MOBILITY

Assessment of tongue mobility includes the:

- Ability to elevate the tongue to the palate with a wide open mouth is the most important part of assessment.
- Spread of the anterior tongue and ability to cup the tongue.
- Elasticity and length of frenulum.
- Extension of tongue over lower lip.

SIGNS AND SYMPTOMS OF ANKYLOGLOSSIA CAUSING BREASTFEEDING COMPLICATIONS

MOTHER:

- Nipple pain
- Damaged nipples
- Blocked ducts/Mastitis
- Low milk supply
- Untimely weaning

INFANT

- Increased suction pressure
- Ineffective milk transfer
- Slipping on and off the breast during a feed
- Failure to thrive

Dangers of over-diagnosis of ankyloglossia as a problem requiring surgical intervention include reduced focus on other reasons for difficulty establishing lactation including poor attachment, poor milk supply and an unwell infant.
MANAGEMENT PLAN:

1. Review by the Paediatric team.
2. Review by a Lactation Consultant.
3. Initiate an individualised plan for mother to preserve the integrity of her nipples, the initiation of her lactation, and the health of her infant.
4. Commence the appropriate ‘Variance Sheet’ when applicable.
5. Commence nipple shield use if appropriate.
6. Commence expressing using an appropriate size breast shield.

DISCHARGE PLANNING:

1. Organise the loan of a breastpump (if required).
2. Referral to the Breastfeeding Centre for follow up if ankloglossia is thought to be significant enough to impair feeding.
3. A referral to either Mr Parshotam Gera or Ms Liz Whan (faxed to 9382 2637), or their secretary may be contacted on 6162 1615. Complete the Tongue Tie referral letter.
4. Organise follow-up to ensure appropriate weight gain following discharge (e.g. VMS, BFC, CHN, GP).
