

CLINICAL PRACTICE GUIDELINE

CMP Risk model inclusion criteria

This document should be read in conjunction with the [Disclaimer](#)

Aim

To define the inclusion criteria for the CMP Risk Model and to provide guidance on the process of assessing a client's suitability for CMP Risk Model care at booking.

Background

There are some situations whereby low risk pregnant women can join the CMP with a known intrapartum risk factor (as listed below).

Acceptance of these women onto the CMP with an intrapartum risk factor is multi-factorial and must involve a collaborative approach between the midwife, midwifery specialist and obstetrician.

Clients with known intrapartum risk factors accepted onto the CMP program will receive antenatal and postnatal care in the community with the CMP midwives and MUST birth in KEMH.

The midwife must NOT attend the woman at home in labour and must direct her to KEMH where the midwife will meet her.

NB: For these clients follow the KEMH [Obstetrics and Gynaecology](#) Antenatal and Intrapartum guidelines.

Inclusion criteria and pre-requisites for the CMP Risk Model

All women requesting a place on the CMP Risk Model must meet the CMP inclusion criteria as per [CMP Inclusion Criteria at Booking: Protocol and Procedure](#) but have an identified intrapartum risk factor listed below:

- Previous caesarean section (VBAC) (non-catchment and only 1 x caesarean accepted) See KEMH Clinical Guideline [Birth after Previous Caesarean Section](#) – Antenatal Preparation
- Previous PPH in excess of 1000mL
- Previous shoulder dystocia
- Previous retained placenta
- Previous perinatal death at term of a normally formed infant
- Grand Multiparous (6 or more births)

VBAC clients and clients with a previous perinatal death accepted for this model of care will require an appointment with the medical team at EWC (KEMH) at 24, 34 and 40 weeks gestation. All other clients on this model will only require a 34 weeks

appointment (or chart review) for an individual plan of care to be developed for labour and birth unless otherwise indicated. If not birthed – a further appointment will be required between 40-41 weeks.

Geographical boundaries

All women **OTHER** than the women booked for VBAC must reside within the geographical boundaries set by KEMH (there is no catchment area for VBAC).
